Why TBL Works

The differential attention on more difficult concepts begins in structures in the Readiness Assurance Process. By reviewing student performance part way through the modules. Activities progress through Bloom’s levels. Focus changed from “who is right” to “what is right” NO teams used voting or compromise after only 5 test together. (192 teams) started by using voting and compromise to avoid and Michaelsen (1999) found that two thirds of teams (n = solving as they get to know and trust each other. Birmingham Teams quickly switch from voting/compromise to real problem solving and not building lengthy product prevents many 1989 /f_inally arrive at a socially veri/f_ied version of the “truth” or optimal /f_ind the correct answer, they return to the question for further discussions and back into the reading material, exactly where they are having the most difficulty. Once the Appeals Process is complete, the instructor can provide a targeted mini-lecture on the most troublesome concepts.

What is TBL?

Team-Based Learning – A special form of collaborative learning using a specific sequence of individual work, group work and immediate feedback to create a motivational framework in which students increasingly hold each other accountable for coming to class prepared and contributing to discussion. Michael Sweet

Paradigm Shifts

• Course goal shifts from knowing to applying
• Teacher shifts from “sage on stage” to “guide at side”
• Students shift from passive to active
• Responsibility for learning shifts from instructor to student

TBL dramatically shifts the focus of classroom time from conveying course concepts by the instructor to the application of course concepts by student teams. In the TBL process, students acquire their initial exposure for their preparation using a Readiness Assurance Process (RAP). Following the RAP, the bulk of class time is used to practice applying content in a series of team application exercises. The components of TBL are very adaptable to many situations, disciplines and classroom types.

Four Key TBL Design Principles

• Large teams are required (5-7); teams should be diverse and permanent.
• Accountability for student pre-class preparation and contributing to team success
• Students make complex decisions that require the use of the course concepts that can be reported in simple form
• Frequent and timely feedback must be given to students.

In a traditional course when a student team completes an application assignment, the instructor often only gets to view the final product and therefore has limited opportunity to provide students with timely feedback as their application assignment progresses. By contrast, since TBL application activities occur in the classroom, there are opportunities for rich and detailed feedback from both peers and the instructor.

Attention focuses on harder concepts

As students progress through the Readiness Assurance Process, there is a natural shift in instructional focus to the harder, more difficult concepts. This shift is caused by the underlying structures in the Readiness Assurance Process. The differential attention on more difficult concepts begins in

Works in large class settings

TBL was originally developed by Larry Michaelsen, at the University of Oklahoma Business School when his classes went from 40 to 120. He was unwillng to give up the effective outcomes that were possible in the smaller class using Socratic discussion. When he first tried TBL, he was surprised at how effective it was. TBL is now routinely used in large classes (up to 400, but more typically 120-150 Students with a single facilitator) and is even possible in difficult classroom spaces (i.e. tiered lecture theatres). Bottom line is - give students something accountable for coming to class prepared and contributing to team success for student pre-class preparation and contributing to team success

Instructional focus shifts to learning how to use course concepts

TBL shifts the bulk of content acquisition out of the classroom and gives students the responsibility for gaining the initial understanding of course concepts through the Readiness Assurance Process. With TBL, students spend the bulk of class time in the application of course concepts to problem-solving. This is in contrast to the traditional lecture model, where the bulk of classroom time is spent conveying course content and team application assignments are most often completed outside of the classroom. By shifting application activities into the classroom, the students can better understand the usefulness of the instructor and get more immediate feedback on their decisions and thinking process.

In the Past 20 years, over 99.95% of the teams have outperformed their best member by an average of nearly 14% in the Team Readiness Assurance Test. During the IRAE, the teams will often vote on questions, accepting consensus when it exists and quickly moving on. On more difficult questions, where there is no clear consensus, they will discuss for a longer period of time. The length of the discussion is affected by the overall difficulty of the question and the underlying concepts. Each time the team scratches off the IF-AT card and does not find the correct answer, they return to the question for further discussion. Following the IRAE, the teams are encouraged to appeal incorrect answers. This pushes the teams into further discussions and back into the reading material, exactly where they are having the most difficulty. Once the Appeals Process is complete, the instructor can provide a targeted mini-lecture on the most troublesome concepts.
How TBL Works

Getting Your Students Ready
The Readiness Assurance Process (RAP) occurs at the beginning of each major instructional unit. The RAP ensures that students are held accountable for completing the pre-class reading and have acquired the foundational knowledge that they will need for the in-class team work that follows.

At the first class meeting of a module, a multiple-choice test (15-20 questions) is given. It covers key concepts and important foundational knowledge from the readings. The test is first taken individually and then immediately re-taken as a team test using the IF-AT (Immediate Feedback Assessment Technique) "scratch and win" testing cards. At the completion of the team test, teams are encouraged to "appeal" incorrect answers for extra marks. The appeal process requires teams to look up the "right" answer and complete a written form that is only considered after the class meeting. The appeals process pushes students back into the readings right where they are having the most difficulty. Following the appeals process the instructor provides a short clarification in the form of a mini-lecture. The focus of this clarification is often informed by the item analysis from the individual tests (if tests are scanned in real-time in the classroom).

Readiness Assurance

Pre-Readings
Readings typically consist of 30-50 pages (textbooks, monographs, reports and papers). It can be worthwhile to provide a reading guide if the students are new to reading the literature of the discipline. “Less is More” with readings. Students tend to do no reading at all when page counts get too high. They seemingly devote a fixed length of time to reading, no matter the length or complexity of the readings, so use their attention wisely.

Individual Readiness Assurance
The Individual Readiness Assurance Process Test (IRAT) typically consists of 15-20 multiple-choice questions. The IRAT holds students accountable for acquiring important foundational knowledge from the readings that will ready them to begin problem-solving in subsequent class sessions. The questions are typically written at Bloom’s levels: remembering, understanding and simple applying. The test is normally administered using scantron, but a scanner is not required.

Team Readiness Assurance
The Team Readiness Assurance Process Test (tRAT) is completed in teams using the same test as the IRAT.

In-Class Activities (4 S’s)

• Significant Problems. Teams work on a relevant, significant problem.
• Same Problem. Teams work on the same problem.
• Specific Choice. Teams required to make a specific choice.
• Simultaneous Report. Teams report simultaneously.

In the TBL classroom, the bulk of class time is spent having student teams solve and discuss relevant, significant problems. Structuring the problems around the TBL 4S’s lets you leverage the power of team processing without many of the problems (like social loafing) that are inherent in other forms of small-group work learning. The structure of the TBL activities gives individuals, teams and the whole class many opportunities to reflect and get feedback on the specifics of their thinking and their process for arriving at their answer. The activity reporting allows students to engage with a diverse set of perspectives and approaches to problem-solving.

Significant Problem
Select a Significant Problem
For a successful application activity, it is best to select a significant, relevant problem that captures the interest of students. The quality of the problem ultimately is the most powerful factor in influencing the effectiveness of an application activity. Problems should require students to use course concepts to solve them. Backwards Design can be used here to first decide on the problem, and then trace things back to the course concepts that the students would need to solve the problem. By understanding the course concepts at play, you can then select appropriate readings and construct appropriate Readiness Assurance Tests.

Same Problem
Teams are given the Same Problem
Giving the same problem to all teams lets you create reporting opportunities for teams to defend, challenge, discuss, and examine each other’s thinking and problem-solving process. Having the teams work on the same problem ensures the comparability of student decisions and acts as a potent discussion starter. The sequential report, where teams work on different problems, is often a very low energy event, where other students have little motivation to examine the thinking and decisions presented.

Specific Choice
Each team must make a Specific Choice
Open-ended questions have long been the hallmark of our efforts to foster critical thinking in our students, but complex, open-ended question might be too challenging for the novice learner. The most significant drawback in using open-ended questions is the difficulty in efficiently letting students report their answers and the difficulty in comparing their answers with their peers. This opportunity for comparability of decisions is one of the major strengths of the TBL reporting process.

Simultaneous Report
Teams Simultaneously Report their decision
Simultaneous reporting can be accomplished with the simple holding up of a card indicating a particular choice. When a particular team sees that another team has made a different decision, they naturally want to challenge the other teams’ decision. In the ensuing conversation, the teams challenge each other and defend their own thinking. The reporting requires teams to articulate their thinking to other teams - putting their thoughts into words. This helps cognitively with the process of creating enduring, deep understanding. The feedback from their peers is very immediate and focused on “how did you arrive at your decision” and not “which is the right answer.”
